PHONEPE TRANSACTIONS

DATA ANALYSIS USING POWER BI

Project performance review | October 2026

PROJECT OVERVIEW

Objective: evaluate payment activity, transaction value, user demographics and service performance.

Sources: Phonepe-Final-Dataset.xlsx (110,002 user rows; 300,000 transaction rows), PhonePe_Analysis.pbix, and supplied dashboard image.

EXECUTIVE SUMMARY

300K transactions | 3.47bn displayed transaction value | 108K dashboard users

Dashboard reports a 96.00% successful rate. The workbook includes 110,002 user records; this may differ from the filtered dashboard distinct-user measure.

POWER BI DASHBOARD

PhonePe

Payment insights, powering Bharat

Secure. Simple. Seamless.

Month: All

Payment Status: Failed | Pending | Successful

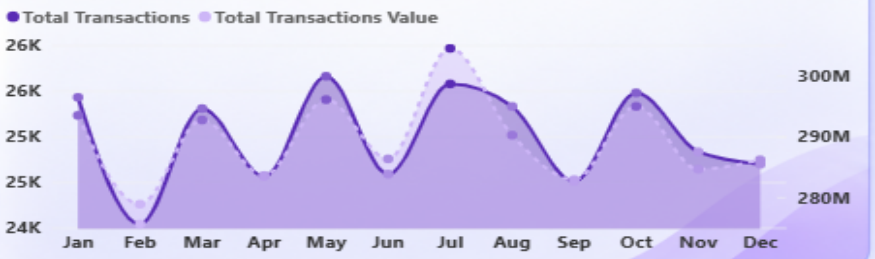

Total Transactions 300K — 8.97% MOM Growth

Total Value 3.47bn — 8.98% MOM Growth

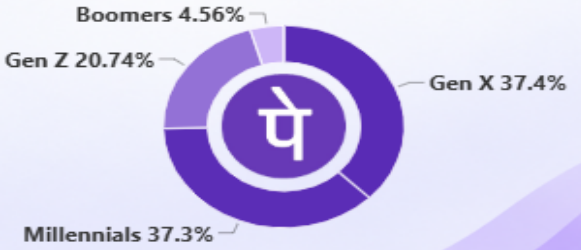

Total Users 108K

Successful Rate 96.00%

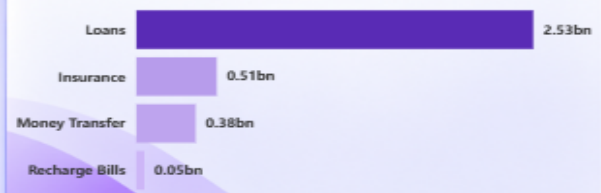

Transactions Over Time

Age Segment Contribution

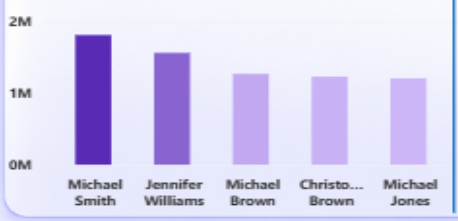

Service Transactions Value Analysis

Top 5 Users

(By Transaction Value)

Weekday v/s Weekend Usage

INSIGHTS

> *On Weekdays the number of transactions are maximum.*

>*Loans service gives the highest transactions value.*

TRANSACTION PERFORMANCE

300K total transactions | 3.47bn total value

The dashboard displays MoM growth of 8.97% in transactions and 8.98% in value. Confirm period and denominator in the PBIX model before treating these as full-period changes.

PAYMENT RELIABILITY

96.00% successful transaction rate

Approximately 4% of transactions are non-successful on the displayed KPI. Segment failed and pending payments by service, month and reason to prioritize remediation.

SERVICE-WISE CONTRIBUTION

Loans: 2.53bn | Insurance: 0.51bn | Money transfer: 0.38bn | Recharge/bills: 0.05bn

Loans account for approximately 72.9% of displayed 3.47bn transaction value; high concentration creates an opportunity and a portfolio risk.

CUSTOMER DEMOGRAPHICS

Gen X: 37.4% | Millennials: 37.3% | Gen Z: 20.74% | Boomers: 4.56%

Gen X and Millennials together contribute about 74.7% in the dashboard age-segment visual. Check whether segment share is users, transaction count or value.

USAGE PATTERNS

Weekdays: 71.6% | Weekends: 28.4%

Most activity is on weekdays. Compare this distribution with the expected 5/7 calendar-day baseline before claiming higher per-day weekday usage.

MONTHLY TREND

Dashboard chart shows fluctuations across January–December.

Visible peaks occur around May and July, with lower periods around February and September. Exact monthly totals should be read from the model or underlying aggregation.

TOP USER ANALYSIS

Top 5 users are ranked by transaction value in the dashboard.

Concentration among high-value customers can guide retention programs, but should be assessed alongside frequency, service mix and anomaly detection.

KEY FINDINGS

Strong displayed payment success; loan-led transaction value; age concentration in Gen X and Millennials.

Growth KPIs are positive on the dashboard; weekday transactions dominate total usage; service diversification and payment exception management deserve attention.

RECOMMENDATIONS — OPERATIONS

1. Track failure and pending reasons with daily exception dashboards.

2. Introduce service-specific conversion and recovery KPIs. 3. Monitor MoM growth with consistent calendar and status definitions.

RECOMMENDATIONS — GROWTH

1. Cross-promote money transfers, insurance and bill payments to reduce loan concentration.

2. Tailor campaigns by age segment. 3. Test weekend promotions and measure lift per active day, not only share of transactions.

RECOMMENDATIONS — ANALYTICS

Build a validated semantic model with explicit measures and documented filter context.

Add cohort retention, active users, median transaction amount, funnel conversion, failure reason drill-through and anomaly alerts. Validate dashboard KPIs against source tables.

LIMITATIONS & NEXT STEPS

The supplied dashboard is a static snapshot; exact DAX measures and filters were not independently validated.

Dataset counts are verified from workbook sheet rows. Reconcile 110,002 source user rows with 108K displayed users and confirm currency, service categories, and metric definitions.

THANK YOU!

Thank you for your time and attention.
